

Retention Sockets

Pole locator tool

Overview

The pole locator tool has been developed to streamline and safeguard the installation of poles and columns into the NAL retention socket. By providing a secure holding point, this tool facilitates accurate alignment and lowering of poles and columns, ensuring safe, efficient installation.

Key features

- ◇ Securely locks into the retention socket, replacing the side chamber cover during use
- ◇ Provides a fixed holding point to maintain pole/column alignment during installation
- ◇ Enables poles/columns to be lifted and positioned vertically with minimal manual handling
- ◇ Designed for use by two operatives, improving both speed and accuracy of installation
- ◇ Robust construction for repeated use on site

Advantages

- ◇ Enhances safety by stabilising the pole/column base during lifting and positioning
- ◇ Reduces risk of misalignment and installation errors
- ◇ Minimises manual handling risks and installation time
- ◇ Supports precise, professional placement of street furniture
