

# Retention Sockets

## Side chamber covers

### Overview

The NAL side chamber covers are a standard component supplied with every NAL retention socket, providing secure protection to the socket side chamber. These covers prevent unauthorised access and safeguard internal components, supporting both operational integrity and site security for street furniture installations.

### Key features

- ◇ Supplied as standard with T-key or Tri-key fixings for secure and convenient access
- ◇ Bespoke fixing options available to meet specific project requirements (subject to order quantities)
- ◇ Range of heavy-duty bolt sheafs can be manufactured for applications demanding enhanced or specialised security
- ◇ Engineered to fit seamlessly with all NAL Retention Socket models

### Advantages

- ◇ Protects against unauthorised access and tampering
- ◇ Supports a wide variety of security levels to suit different site needs
- ◇ Flexible options for both standard and high-security installations
- ◇ Customisable to meet unique customer specifications
