STAKKAbbox & Composite Covers | The Ketch Worcester

During the year long project to revamp the A38 Ketch island, Worcestershire County Council chose the NAL STAKKAbbox Access Chamber system to assist with carriageway installations.

The STAKKAbbox removes the need for traditional, high maintenance concrete chambers by employing a strong, light weight chamber thanks to the use of the patented TWIN WALL technology, which can withstand a vertical load of up to 40 Tonnes.
